DWA_04.3 Knowledge Check_DWA4

_____

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

Use const for all your references; avoid using var. This is useful because it ensures you don't reassign references which can lead to bugs and difficult to read code. Use array spreads … to copy arrays. This is useful because it is much quicker, shorter to type out and easier overall in order to copy the contents of one array into another. Use object destructuring when accessing and using multiple properties of an object. This is useful because it saves you from creating temporary references for properties, and from repetitive access to an object.

_____

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

Use computed property names when creating objects with dynamic property names. This is confusing because I do not know what computed and dynamic property names are. Never use eval() on a string; it opens too many vulnerabilities. This is confusing because I do not know what the eval() function is and why it would open vulnerabilites. Prefer the use of the spread syntax … to call variadic functions. This is confusing because I do not know what a variadic function is.
